

Add, Change, or Remove a Staff WordPress User

Version: v1.1 | Required role: Administrator only

Before you begin

- Confirm the staff member's full name and unique work email.
- Confirm whether the request is to add, change, reset, or remove access.
- Confirm the minimum approved role. Editor is sufficient for routine practitioner and event work.
- Never share or reuse another person's login.

Add a staff user

- Sign in with your own Administrator account.
- Open **Users > Add New User**.
- Enter a permanent username and the person's unique work email.
- Enter the person's first and last name.
- Keep the secure generated password and user-notification option.
- Choose **Editor** for routine approved content work. Use Administrator only when specifically approved.
- Review every field, select **Add New User** once, and wait for confirmation.
- Have the staff member use the invitation, set a private password, and verify the needed menus.

Change or reset access

- Open **Users > All Users** and match both name and email.
- Use **Edit** to change only the approved Role, then save once.
- Use **Send password reset** instead of requesting or sharing passwords.

Remove access

- Verify the exact departing account and select **Delete**.
- Choose **Attribute all content to** an approved continuing Administrator, such as Rebekah.
- Never choose **Delete all content** without Blue Nova approval.
- Confirm the old account can no longer sign in.

Always finish with: Confirm the person > assign the minimum role > verify the resulting access. Stop and contact Blue Nova when a role, Administrator account, or content reassignment is uncertain.
