

Create or Update a Blog Post Safely

Version: v1.1 | Required role: Editor or Administrator; Editor is sufficient

Prepare first

- Final approved title and article copy
- Approved existing category
- Approved featured image and useful alt text
- Exact internal and external links
- Approved search title and description

Create or update

- Open **Posts**. Choose **Add New Post** or match the exact existing title and select **Edit**.
- Keep new work in **Draft**.
- Enter the approved title and complete article in the Visual editor.
- Use clear headings, short paragraphs, and useful lists.
- Choose the correct existing category. Do not create or guess categories.
- Add the approved featured image and descriptive alt text.
- Link descriptive words and test every changed link.
- Complete the approved SEOPress title and meta description without keyword stuffing.
- Preview the full article at desktop and phone sizes.
- Use **Publish** only for a complete approved new article; use **Update** for an approved existing article change.
- Click once and wait for WordPress confirmation.

Verify publicly

- Clear only the applicable cache.
- Open the exact public article URL with no extra address text.
- Verify the visible copy, image, category, author, and links.
- Check the Blog archive and repeat at phone size.

Always finish with: Draft > preview > publish or update once > clear applicable cache > verify the article and Blog archive on desktop and phone.
