

Upload and Use Images in the Media Library

Version: v1.1 | Required role: Editor or Administrator; Editor is sufficient

Prepare the file

- Confirm the image is approved, licensed, and free of private information.
- Confirm the intended crop and web-ready size.
- Rename before uploading: short lowercase words separated by hyphens.
- Keep the correct .jpg, .png, or .webp extension.

Upload and describe

- Open **Media > Library > Add New Media File**.
- Select the exact approved file and wait for the upload to finish.
- Stop and read any upload error; do not create duplicates.
- Add concise alt text describing the important subject or purpose.
- Use a readable Media Library title.
- Add a Caption only when it should appear publicly.
- Use Description only when the site process requires it.

Place and verify

- Open the exact content item and its image control.
- Choose the correct Media Library thumbnail and intended size.
- Preserve the natural proportions; do not stretch the image.
- For replacement, upload the new approved file and update the exact content item.
- Do not delete old media without Blue Nova review.
- Save or Update once and clear only the applicable cache.
- Verify sharpness, crop, placement, and linked-image behavior on the exact public page at desktop and phone sizes.

Always finish with: Upload once > alt text > place correctly > save once > clear applicable cache > verify publicly.
