

Website Editing Safety and Recovery

Version: v1.1 | Required access: Use the minimum assigned role; Editor is sufficient for routine approved content

Safe start

- Confirm the live domain: rebekahspureliving.com/wp-admin.
- Use only your own named login.
- Confirm the exact page, post, event, practitioner, or other record.
- Gather the final approved replacement information before editing.
- Stop if the task, record, role, or wording is uncertain.

Safe edit

- Change only the fields named in the approved request.
- Leave unrelated copy, images, categories, links, dates, and settings unchanged.
- Keep new or uncertain work in **Draft** and use **Preview**.
- Check images, links, names, dates, times, prices, addresses, phone numbers, store details, and health wording.
- Do not change Appearance, Plugins, Settings, users, Cloudways, servers, payments, store integrations, or optimization controls without separate authorization.

Save and verify

- Select the correct **Save**, **Update**, or **Publish** action once.
- Wait for WordPress confirmation.
- Clear only the applicable page or record cache; use broader purges only when approved.
- Open the exact canonical public URL with no extra address text.
- Verify the visible result and affected controls at desktop and phone sizes.

Stop and contact Blue Nova when

- The screen or menu does not match the instructions.
- The correct record or approved information is uncertain.
- WordPress reports an error or does not confirm the save.
- The live result is wrong, missing, broken, or still stale.

Always finish with: Correct item > approved change only > save once > clear applicable cache > verify publicly.
